

Calling all clinicians who care for adult cardiac surgery patients

Scan the QR code to start!

Do you care for adult cardiac surgery patients? We want to hear from you

Take part in a survey exploring clinicians' perceptions of **the barriers and facilitators associated with using remote monitoring devices to detect atrial fibrillation (AF) in adult cardiac surgery patients** after hospital discharge.

Your insights will contribute to the development of evidence-based strategies aimed at supporting a safe and effective adoption of remote monitoring devices in clinical practice.

 Quick + **confidential** survey

 Takes approx. 10-15 minutes

Part of a University of Wollongong PhD study

Your voice matters. Thank you for your contribution.
